The Classical, Gazal, Hip-pop/rap, jazz, remix dj, mashup, English song and folk) music varieties. one in all it was done while not any background music, that served as a management of the study. The information obtained from the responses were compiled fitly and given within the variety of charts and graphs.

### **A. Research Design**

A research style is taken under consideration as a result of the framework or set up for a study that guides additionally helps the data assortment and analysis of data.

### **B. Research Approach**

The scientist contacted the respondents in person with well-prepared consecutive organized queries. The form is prepared on the concept of objectives of the study. Direct contract is student for survey, i.e., contacting students directly thus on gather information

### **C. Sample Size**

The study use simple random sampling. Simple random procedures are used to select the respondent from the available database. This cross-sectional study was conducted over 117 student participants.

### **D. Collection of Data**

The study is principally supported primary knowledge that were collected from the university's student, and publish analysis report . The distribution was done victimisation Mail and Whatsapp.

- Primary knowledge: the first knowledge area unit those, that area unit collected anew and for the first time and so happen to be original in character. the first knowledge were collected through well-designed and structured questionnaires supported the objectives.
- Secondary knowledge -Various Information's collected from company records.

### **E. Data Collection Instrument**

The questionnaire was prepared based on the Google form.

### **F. Tools Used for Analysis**

Information obtained from the respondents was analyzed and taken with the assistance of Microsoft word 2007. within the gift study following tools are used for analysis of hand-picked university of PG students. The applied math tools used for analyzing the information collected area unit share methodology, chi square, cross-tabulation, bar diagrams and pie diagrams.

### **G. Analysis of Data**

The data area unit collected through survey and books, reports, newspapers and web etc, the survey conducted

among the Post Graduated student of various university. the information collected by the research worker area unit tabulated and analyzed in such the way to type interpretations. varied steps, that area unit needed to satisfy the aim, i.e., editing, coding, and tabulating. Rendering refers to assignment variety or alternative symbols to each account inserting them in orders to arrange knowledge for tabulation refers to gather the associate logos knowledge in rows and columns and totalling them in an correct and significant manner The collected knowledge area unit anatomized and intruded victimisation applied math tools and ways in which

**H. Limitations of the Study**

The study restricted to PG student for Vadodara cities in selected universities.

Only 117 respondents were considered as sample for this study.

Respondents opinion are dynamics, they keep on changing from time to time.

Some of the information was not available due to confidential matters.

There may be possibility of human error.

**I. Data Analysis and Interpretation**

Table 1: the frequency distribution of Gender of the respondents

| Gender | Response | Percentage |
|--------|----------|------------|
| Female | 63       | 54         |
| Male   | 54       | 46         |

Figure 1: Chart of Gender respondents

From the above column chart, the conclusion is 53.84 of respondents are Male and 46.15 of respondents are Female. While working in their life they are listening music. In the responses female are greater than male.

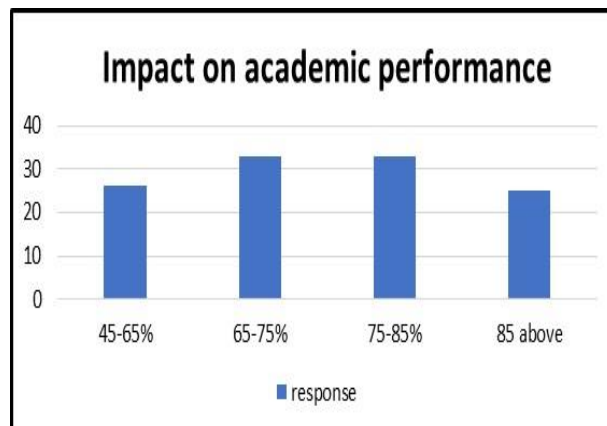

Table 2: Frequency distribution of Impact on academic performance

It can be observed from above chart that out of 117 respondents, percentage of students when they listening music during studies. 65-85% effective on studies when they are listening music. Positive effect on students when they are doing studying with music.

Table 3: The frequency distribution of how do you long listening music in daily hours

| Study time       | Response | Percentage |
|------------------|----------|------------|
| 30 min           | 3        | 7%         |
| 1 hour           | 43       | 13%        |
| 2 hour           | 41       | 37%        |
| 3 hour           | 10       | 8%         |
| More than 3 hour | 15       | 13%        |

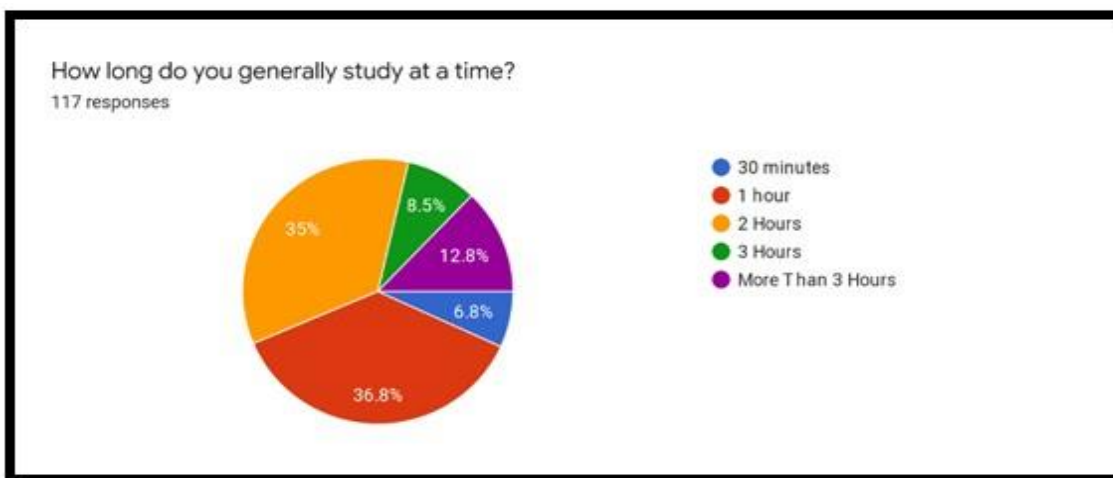

Figure 3: Chart of How do you long listening music in daily hour respondents

From the above column chart they are studying at the time.35% respondents are studying 2 hours'.36.8% respondents are studying 1 hours' only.7% respondents are studying only 30 minutes.9% respondents are studying 3 hours in their daily life.13% are studying more than 3 hours.

#### **J. Finding**

The student who having interest fir listing music while during study time and their effect is on their studies it is positive or negative this is finding from this research paper. After receiving responses from post students there affect is positive on their study and academic performance, mostly they are listening classical music and English song while doing study.

#### **K. Suggestion**

To discovered over all responses there i will aforesaid to student WHO don't seem to be listening music in their operating hours of life, i will be able to suggests thereto student to listening music in there busy life, throughout period of time, throughout studding and alternative such a big amount of work , i am ill-natured notify u your memory can grow , you're feeling refreshing from your work and restful yourself with such a big amount of edges. Out of 117 responses principally positive result is there, nearly student is listening music whereas throughout finding out time, and there result is positive on them.

#### **L. Results of Questionnaire Study**

Upon asking frequency of being attentive to music, out of 117 students forty sixth students area unit listening music generally,26% students speech ugly affirmative to listening music,27% students will listening music often.

## **IV. CONCLUSION**

The main aim of this study was to research the impact of music on student. once student do finding out or any work associated with education that point they're listening music and what's the result of music on his studies. The findings are scenario of PG students they're doing finding out with music however they cruelty their efforts on study with music. The study goes with swish approach, his reminiscences are increasing, music facilitate to review a lot of this all issues area unit sure} finding by me during this analysis. Most of respondents are from classical song and English song. this is {often this can be} often as a results of, 75-85% result's positive for result there study. They're doing no matter add their life, however they're listening music with their work it's effective.

## **CONFLICTS OF INTEREST**

The authors declare that they have no conflicts of interest.
